Proposed Solution Template:

Project team shall fill the following information in proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problemsolved	To analyse which patients are most like to be suffer from heart disease based onparameter provide visualizationdashboards and uses thi informationeasily visualize and predict the patientdetails.
2.	Idea / Solution description	Parameters in data set helps hospitalsidentif patient heart conditionhealth condition.A das usingcognitive analysis can be created tothe utilize it for future use
3.	Novelty / Uniqueness	Many tests are taken by doctors topresence disease. The parametersused are often under only byprofessional.Time can be saved.Toa significant contribution in computingstrength with significant predictorsHeart disease pred
4.	Social Impact / Customer Satisfaction	● Reduces the patient's risk level● Reduces medical costs● Save human lives ● Handy Interactive dashboard● It will make the hosp workefficiently ● It help the hospitals to knowtherecords of heart patient
5.	Business Model (Revenue	Model) ● Awareness can be created among through ads ● Updates will be updated accordingtothe necessity for the patients● N complexity ● Data security ● This project ca convertedsoftware kit, webpage or evenappl which users can interactwith.
